Project Design Phase-I
Solution Architecture

Date	25 October 2023
Team ID	NM2023TMID00183
Project Name	FOOD TRACKING SYSTEM
Maximum Marks	4 Marks

Solution Architecture:

Solution architecture is a complex process – with many sub-processes – that bridges the gap between business problems and technology solutions. Its goals are to:

● Find the best tech solution to solve existing business problems.

● Describe the structure, characteristics, behaviour, and other aspects of the software to project stakeholders.

● Define features, development phases, and solution requirements.

● Provide specifications according to which the solution is defined, managed, and delivered.
Solution Architecture Diagram:

Figure 1: Architecture and data flow of the Food Tracking system.

Prerequisites:

1 download node.js : https://nodejs.org/en
2 download vs code: https://code.visualstudio.com/download
3 download MetaMask : https://metamask.io/

Steps to complete the project:

Step 1:-
1. Open the Zip file and download the zip file.

2. Extract all zip files

Step 2 :
1. Open vs code in the left top select open folder. Select the extracted file and open it.

2. Select the FoodTracking.sol file and copy the code.

3. Open the remix ide platform and create a new file by giving the name of FoodTracking.sol and paste the code which you copied from vs code.

4. Click on solidity compiler and click compile the FoodTracking.sol

5. Deploy the smart contract by clicking on the deploy and run transaction.

6. In the environment, select the injected provider – MetaMask.

7. Click on deploy. Automatically MetaMask will open and give confirmation. You will get a pop-up, click on ok.

8. In the Deployed contract you can see one address, copy the address.

9. Open vs code and search for the connector.js. In connector.js you can paste the address at the bottom of the code. In export const address.

10. Save the code.

Step 3:
Open file explorer

1. Open the extracted file and click on the folder.

2. Open src, and search for utiles.

3 . You can see the frontend files. Select all the things at the top in the search bar by clicking alt+ A. Then search for cmd.

4. Open cmd and enter commands
     npm install
     npm bootstrap
     npm start

5. It will install all the packages and after completing it will open {LOCALHOST IP ADDRESS}
Copy the address and open it to Chrome, so you can see the front end of your project.
